

Noah - ITS

Tickets can become an important element in an asset lifecycle - what has been done with the asset - by whom, when..

Ticket system in Noah has been developed to be able to cover the current needs - with focus on usability and overview.

Noah - your place or ours?

Noah has been developed with the point of customer owned data. Customers are often best off with handling and saving that kind of information Noah may contain, internal in company premises.

Should you not have the requirements, we offer to host your setup on our equipment - to an attractive price and with the needed safety for operation and stability.

Noah - CMDB

By registering the basic data from an asset - everything from physical units, power usage and cooling to current location, the option to receive the information again quickly if the asset has a breakdown or needs service.

Optionally following functions are available:

- Connections
- Domains
- Service windows (maintenance)
- Licenses
- Suppliers
- Agreements
- Service Level Agreements
- Network
- IPv4 and IPv6 registering
- Vlans

ITS - Tickets Overview

Assets Overview

Overview

CMDB and ITS in one package

Gain control of your assets

Whether you have 20 or 2000 assets, the task of controlling the assets and their lifecycle is a tedious task.

Let Noah help you with this by creating overview, saving time and money.

Noah gives the opportunity to gain an overview of your assets, where they are placed (saves time for later service) and you may have an alert when service or warranty expires.

Get overview of you scheduled maintenances, keep track of suppliers and support agreements for your assets.

Give your customers better service by having overview and the time to be there for the customer.

**All this at a great price -
great service included**
